

ATTENDEE INTERACTIVE
CONFERENCE MANAGEMENT SOFTWARE

Abstract Management

Attendee Interactive's Abstract Management Module provides a oneofakind web based document submission system which allows for the streamlining and automation of the submission, collection, review and managing of abstracts, white papers and presentations for conferences. Our second generation Abstracts Module provides clients with a better and more efficient way to create and manage their programs saving both time and money.

Our Abstract Module seamlessly integrates with our other modules to provide users with completely integrated system to meet all of your conference planning needs. Whether you are collecting topics, scheduling speakers, assigning rooms or building your conference website, we are with you all the way.

- Create your own custom electronic forms to be included with a submission
- Multi-leveled peer review process
- Dynamic session building
- Built in communication tools
- Powerful reporting tools
- Export data for publication
- Integrates with other tools
- Experienced support

Abstract Management

This tool was designed to provide a highly customizable, flexible, yet simple web-based document submission system. The software streamlines and automates the submission of abstracts, supporting documents, white papers and presentations for scientific and educational conferences. Choose from an array of options and templates or custom design your own submission site. Use your images and banners to retain the look and feel of your meeting website. Apply specific criteria and rules that must be met before a submission will be considered "complete". Insert and edit your own instructions and language for each step in the process. Establish character/word limits and optionally allow the inclusion of tables and graphics. Table creation is simple, using the Microsoft Word table editor functionality. You may also upload a table from Microsoft Word or Excel.
